

# Java Software Engineer

## **Overview**

This is an opportunity for an experienced Java Software Engineer to work with a growing, fast-paced technology company that services the Federal Government on key technology contracts. The work will entail creating new applications using cutting-edge technologies and frameworks and integrating existing systems at all functional layers.

The engineer will be responsible for various activities within the full cycle of software development (from requirements development through deployment and O&M). The projects will involve working with a strategic partner of our company performing software engineering on Service Oriented Architecture (SOA)-enabled applications.

## **Mandatory Qualifications**

- o 2-4 years experience writing multi-tiered applications in a Java/J2EE environment or using any of the popular POJO-based frameworks (e.g. Spring, Cocoon, Seam)
- o Experience writing and consuming web services
- o Experience designing databases and writing data access code
- o In-depth experience with the entire Software Development Lifecycle (SDLC)
- o Experience performing OOA/OOD
- o Fluent in design patterns and principles
- o Has been involved in original creation of programs (and not just program maintenance)
- o Experience performing unit testing within various frameworks (e.g. JUnit)
- o Able to write clean, well-documented code
- o Able to learn new technologies and products very quickly and adapt to changing situations rapidly
- o Understands and follows software engineering best practices
- o Self-starter but must be able to work in a team

## **Desired Qualifications**

- o Experience using an Enterprise Service Bus (ESB)
- o Experience using various middleware tools (e.g. MQSeries, Webmethods, Tibco)
- o Experience with MVC frameworks

Must be able to hold a security clearance (this position does not require a security clearance but other work may)

Must be eligible to work in the U.S. for any company without sponsorship. This position is immediately available. Relocation is not available.

The work location is the Los Angeles area, in the cities of either Brea or Torrance. Arrangements and compensation for commute can be made if the engineer lives in the San Diego area.

The employment arrangement may be either full-time/W2 or 1099.

Please respond with your resume and, if possible, with samples of your previous work.
