The Navy's Space and Naval Warfare Systems Command, or SPAWAR, has awarded San Diego-based **Sentek Global** a five-year, \$70 million contract.

Sentek, a government and commercial IT security and consulting company, will provide systems engineering and technical assistance for the PMW 150 Command and Control, or C2, Program Office under the task order.

Through the contract, Sentek Global will support PEO C4I PMW 150's Joint Project Manager Information Systems, Maritime C2 and Support C2 divisions. Its systems engineering and technical support services include service oriented/enterprise architecture, Department of Defense architecture framework, configuration data management, information assurance, certification and accreditation, policy and standards, integration and test evaluation support, enterprise help desk, training and knowledge management, emerging science and technology, system engineering technical reviews and acquisition document development, software development engineering and in service engineering agent management.

"This is our largest SeaPort-enhanced task order to date," said Eric Basu, the president of Sentek Global. "We've developed a reputation for providing unique and invaluable expertise to assist our clients and as a small, flexible business that has the experience and capability to execute contracts of this size."
